

SECTION 4.2: BEARING & MECHANICAL SEAL OPERATIONAL THRESHOLDS

Page 12

1. Temperature Limits: Maximum allowable drive-end bearing operating temperature is 75°C. Tempera
2. Vibration Thresholds: Vibration levels exceeding 4.5 mm/s RMS indicate severe mechanical unbalan
3. Mechanical Seal Leakage: Any mechanical seal leakage exceeding 5 drops/min requires seal cartri
4. Maintenance Frequency: Main drive bearings must undergo full overhaul every 12 months under co
